

LETTER OF RECOMMENDATION

I am pleased to recommend Ms. Nusrat Jahan Bably, whom I supervised during her undergraduate thesis work at the Department of Computer Science and Engineering, United International University.

During her final year research project on Multimodal Speech Reconstruction for Bengali Stroke Patients: Combining Lip Movements and Audio Signals, I had the opportunity to closely observe her research capability, technical competence, and dedication toward solving complex problems. Throughout the research process, she demonstrated strong interest in Artificial Intelligence, machine learning applications, and healthcare-focused technological solutions.

Ms. Bably possesses strong analytical thinking and problem-solving abilities. She showed excellent willingness to learn new concepts independently and applied them effectively throughout her research work. Her ability to approach challenges systematically, conduct literature exploration, and remain persistent during experimentation reflects strong research and technical potential.

The quality and innovation of her thesis work were further recognized through achieving championship distinction in the departmental Final Year Design Project (FYDP) showcase. This accomplishment reflects both the practical impact of the project and her commitment toward producing meaningful research outcomes.

She worked sincerely and responsibly throughout the thesis process and consistently demonstrated professionalism, patience, and commitment toward improving the quality of her work. She is receptive to feedback and capable of refining her ideas through critical evaluation and discussion.

In addition to her research activities, she also served as a Teaching Assistant in both the Computer Science and Engineering and Data Science departments, where she demonstrated mentoring capability, communication skills, responsibility, and professionalism while assisting students academically.

Beyond her technical strengths, she is a thoughtful, empathetic, and creative individual with excellent adaptability and interpersonal qualities. She demonstrates both intellectual curiosity and emotional maturity, which are important qualities for collaborative research and professional environments.

Ms. Nusrat Jahan Bably is a hardworking, self-motivated, and ethically grounded individual with a clear vision for continuous learning and meaningful contribution through technology and research. I firmly believe she possesses the intellectual capability, determination, adaptability, and professionalism required to excel in rigorous academic, research, and professional settings.

Therefore, I strongly recommend her for academic opportunities, scholarships, research programs, internships, and professional roles without hesitation.

Sincerely,

Dr. Mohammad Nurul Huda
